

ABHIGYAN GOSWAMI

Email: abhigyangoswami@gmail.com

Phone: +91 9127295414

LinkedIn: [linkedin/Abhigyan](https://www.linkedin.com/in/Abhigyan)

TECHNICAL SKILLS:

- **Languages:** Python, C++, JavaScript, SQL
- **AI & LLM:** Cursor, Claude Code, Codex
- **Data Platforms & Databases:** PostgreSQL, MySQL, MongoDB
- **Infrastructure & DevOps:** Docker, GitHub Actions, CI/CD
- **Dev/Testing skills:** Agile Development, Web Development
- **Backend & APIs:** FastAPI, REST APIs

SOFT SKILLS:

Problem Solving, Teamwork and Collaboration, Adaptability, Time Management, Communication Skills

EDUCATIONAL QUALIFICATIONS:

- **Master of Computer Applications (Aug'25-Present)**
Manipal Institute of Technology, Manipal, India (CGPA-6.43/10.0)
- **Bachelor of Computer Applications (Aug'22 –May'25)**
SRM Institute of Science and Technology, Chennai, India (CGPA – 9.01/ 10.0)

WORK EXPERIENCE:

Web Developer

Everlabs (Freelance)

November 2024- January2025 (Remote)

- Developed 10+ responsive web pages using Next.js and React, delivering consistent UI across desktop and mobile devices.
- Integrated 10+ REST APIs using Axios, streamlining data fetching, error handling, and state synchronization.
- Implemented Redux for centralized state management, improving application scalability and maintainability.
- Integrated Fitbit API with Supabase for real-time activity tracking, authentication, and secure token management.
- Optimized application performance using SSR, ISR, and dynamic routing, improving page loading and overall responsiveness.
- Collaborated with developers to debug 20+ frontend issues, improving application stability and user experience.

PROJECTS:

[GitHub/Abhigyan](https://github.com/Abhigyan)

➤ **CodeTeach – A coding platform:**

- Developed a full-stack coding platform using Next.js, React, TypeScript, FastAPI, and PostgreSQL, supporting 4 programming languages and interactive code execution.
- Integrated Monaco Editor and Judge0 CE to enable real-time code execution, automated test-case evaluation, and runtime/output analysis.
- Engineered a secure execution sandbox with 5-second timeouts, process isolation, dynamic test-case injection, and local fallback execution.
- Built 10+ REST APIs for authentication, problem management, and submissions using FastAPI, SQLAlchemy, Pydantic, and JWT.
- Implemented JWT-based authentication and Edge Middleware route protection, reducing unnecessary authentication/database requests.
- Designed database models and Alembic migrations for 3 core entities—Users, Problems, and Submissions—with PostgreSQL/SQLite support.

➤ **Quiz Platform System :**

- Developed a full-stack quiz platform supporting timed quiz sessions and 100+ concurrent participants, delivering seamless quiz selection, submission, and result retrieval.
- Implemented RESTful APIs using Node.js, Express.js, and MongoDB, enabling automated answer evaluation and reducing quiz processing time by 70%.
- Leveraged Redis for session management, duplicate submission prevention, and real-time leaderboard updates, improving response times by 60% over database-only operations.
- Designed scalable MongoDB schemas and seeded 500+ quiz questions, ensuring efficient data retrieval and simplified content management.
- Engineered an automated scoring and leaderboard system, providing instant result generation and ranked score tracking while ensuring fair participation through backend validation.

➤ **GoFarm Agriculture Predictive Analytics Web App:**

- Developed a React.js & FastAPI web app, improving UX and accessibility for 1,000+ users.
- Optimized API communication with Axios, reducing data fetch time by 40% and increasing response efficiency.
- Built a FastAPI backend, processing 1,000+ API requests/day with low-latency responses.
- Implemented Pydantic validation, reducing input errors by 30% and improving data integrity.
- Processed & analyzed 500MB+ datasets using Pandas, optimizing computation speed by 35%.
